1) What will be the output of the following code snippet? def func(a, b): return b if a == 0 else func(b % a, a) print(func(30, 75)) **a**) 10 **b**) 20 **c**) 15 **d**) 0 Ans:- c) 15 **2)** numbers = (4, 7, 19, 2, 89, 45, 72, 22) sorted\_numbers = sorted(numbers) even = lambda a: a % 2 == 0 even\_numbers = filter(even, sorted\_numbers) print(type(even\_numbers)) a) Int **b**) Filter c) List **d**) Tuple Ans:- b) Filter 3) As what datatype are the \*args stored, when passed into a) Tuple b) List c) Dictionary d) None Ans:- a) Tuple **4)** set  $1 = \{14, 3, 55\}$  $set2 = \{82, 49, 62\}$  $set3 = \{99, 22, 17\}$ print(len(set1 + set2 + set3))

a) 105 b) 270

- **c**) 0
- d) Error

Ans:- d) Error

	at keyword is used in Python to raise exceptions?
- \ •	
a) raise	2
b) try	
c) goto	
d) exce	ept
Ans:-	a) raise
6) Whi	ich of the following modules need to be imported to handle date time computations in a?
a) time	edate
b) date	
c) date	time
d) time	
Ans: c	) datetime
<b>a</b> )	4**3 + (7 + 5)**(1 + 1)) 248
a) b) c)	248 169 208
a) b) c)	248 169 208 233
a) b) c) d) Ans:- c)	248 169 208 233
a) b) c) d) Ans:- c)	248 169 208 233 208 ich of the following functions converts date to corresponding time in Python?
a) b) c) d) Ans:- c)	248 169 208 233 208 ich of the following functions converts date to corresponding time in Python? time
a) b) c) d) Ans:- c) 8) Whi a) strpi b) strft	248 169 208 233 208 ich of the following functions converts date to corresponding time in Python? time
a) b) c) d) Ans:- c) 8) Whi a) strpi b) strft	248 169 208 233 208 ich of the following functions converts date to corresponding time in Python? time in a) and b)
a) b) c) d) Ans:- c) 8) Whi a) strpt b) strft c) both d) Non	248 169 208 233 208 ich of the following functions converts date to corresponding time in Python? time in a) and b)
a) b) c) d) Ans:- c) 8) Whi a) strpt b) strft c) both d) Non Ans:- a	248 169 208 233 208 ich of the following functions converts date to corresponding time in Python? time time a a) and b) the
a) b) c) d) Ans:- c) 8) Whit a) strpt b) strft c) both d) Non Ans:- :	248 169 208 233 ) 208 ich of the following functions converts date to corresponding time in Python? time time in a) and b) ne a) strptime  python tuple isin nature.

d) none	
Ans:- b)	immutable
	eis a built-in function that returns a range object that consists series of integer numbers, chwe can iterate using a for loop.
В. С.	<pre>range() set() dictionary{ } None of the mentioned above</pre>
Ans:- a)	range()
11) An	nongst which of the following is a function which does not have any name?
B. C. D.	Del function Show function Lambda function None of the mentioned above  Lambda function
<b>12</b> ) Th	ne module Pickle is used to
В. С.	Serializing Python object structure De-serializing Python object structure Both A and B None of the mentioned above
Ans:- c)	Both A and B
	mongst which of the following is / are the method of convert Python objects for writing data inary file?
В. С.	set() method dump() method load() method None of the mentioned above

c)unchangeable

Ans:- b) dump() method

14) Amongst which of the following is / are the method used to unpickling data from a binary file?
<ul><li>A. load()</li><li>B. set() method</li><li>C. dump() method</li><li>D. None of the mentioned above</li></ul>
Ans:- a) load()
<ul> <li>A text file contains only textual information consisting of</li> <li>A. Alphabets</li> <li>B. Numbers</li> <li>C. Special symbols</li> <li>D. All of the mentioned above</li> </ul>
Ans:- d) All of the mentioned above
16) Which Python code could replace the ellipsis () below to get the following output? (Select all thatapply.)  captains = {
"Enterprise": "Picard",
"Voyager": "Janeway",
"Defiant": "Sisko",
}
Enterprise Picard,
Voyager Janeway
Defiant Sisko
a) for ship, captain in captains.items():
print(ship, captain)

b) for ship in captains:

c) for ship in captains:

print(ship, captains[ship])

```
print(ship, captains)
            d) both a and b
   Ans:- d) both A and B
17) Which of the following lines of code will create an empty dictionary named captains?
    a) captains = \{dict\}
    b) type(captains)
   c) captains.dict()
   d) captains = \{ \}
Ans:- d) captains={}
18) Now you have your empty dictionary named captains. It's time to add some data!
Specifically, you want to add the key-value pairs "Enterprise": "Picard", "Voyager": "Janeway",
and "Defiant": "Sisko".
Which of the following code snippets will successfully add these key-value pairs to the
existing captains dictionary?
    a) captains{"Enterprise" = "Picard"}
   captains{"Voyager" = "Janeway"}
    captains{"Defiant" = "Sisko"}
    b) captains["Enterprise"] = "Picard"
    captains["Voyager"] = "Janeway"
    captains["Defiant"] = "Sisko"
    c) captains = {
      "Enterprise": "Picard",
      "Voyager": "Janeway",
      "Defiant": "Sisko",
```

}

d) None of the above

```
Ans:- c)
               captains = {
"Enterprise": "Picard",
"Voyager": "Janeway",
"Defiant": "Sisko",
     }
 19) You're really building out the Federation Starfleet now! Here's what you have:
 captains = {
 "Enterprise": "Picard",
 "Voyager": "Janeway",
   "Defiant": "Sisko",
 "Discovery": "unknown",
 Now, say you want to display the ship and captain names contained in the dictionary, but you also
 want to provide some additional context. How could you do it?
     a) for item in captains.items():
       print(f"The [ship] is captained by [captain].")
     b) for ship, captain in captains.items():
       print(f"The {ship} is captained by {captain}.")
     c) for captain, ship in captains.items():
       print(f"The {ship} is captained by {captain}.")
     d) All are correct
 Ans:- b) for ship, captain in captains.items():
print(f"The {ship} is captained by {captain}.")
20) You've created a dictionary, added data, checked for the existence of keys, and iterated over
it with a for loop. Now you're ready to delete a key from this dictionary:
 captains = {
 "Enterprise": "Picard",
   "Voyager": "Janeway",
 "Defiant": "Sisko",
```

```
"Discovery": "unknown",
}
```

What statement will remove the entry for the key "Discovery"?

- a) del captainsb) captains.remove()c) del captains["Discovery"]d) captains["Discovery"].pop()

Ans:- c) del captains["Discovery"]
